

Skype for Business Gateway-as-a-Service

Enterprise video collaboration made simple.

- ✓ Seamless 2-way dialing between videoconferencing units (SIP protocol) and Skype for Business ecosystems
- ✓ Cutting-edge technology built on Videxio's dedicated cloud network + Microsoft Azure
- ✓ Invite and meet non-Skype for Business contacts on video
- ✓ Supports any Skype environment: online, on-premise, hybrid
- ✓ Comes as standard with **Videxio for Video Units** premium plan

Skype for Business Gateway-as-a-Service

Live video collaboration at scale used to be complex, especially if you wanted to connect Skype for Business to external video networks. Our gateway service makes it easy. When your videoconferencing unit (SIP protocol) is registered on the Videxio service, you can unlock fast, effective workflows that help people do even more with video.

CHOOSE YOUR WORKFLOWS:

Calling between Skype and external video networks creates impossibly long, complex dialing strings that most users and video networks can't use. Our gateway converts strings into easy, short video addresses formatted like email addresses.

- + CALL FROM A VIDEOCONFERENCING UNIT TO A SKYPE FOR BUSINESS USER
- + CALL FROM A VIDEOCONFERENCING UNIT INTO A SCHEDULED SKYPE FOR BUSINESS MEETING
- + CALL TO A VIDEOCONFERENCING UNIT AS SKYPE FOR BUSINESS USER
- + CALL TO A VIDEOCONFERENCING UNIT FROM INSIDE A SKYPE FOR BUSINESS MEETING

CHOOSE MEETING ROOM MODE.

Join Skype for Business meetings from your conference rooms with a single click. **Meeting room mode** offers wireless "one tap to join" functionality from your videoconferencing units to dial into scheduled Skype for Business meetings in seconds.

It works by integrating your videoconferencing units with the **My Meeting Video app** and your company's existing calendar/room booking system. You're then able to permanently place a tablet or smartphone device in your meeting room alongside that room's videoconferencing unit. The tablet or smartphone device is connected to the video system, displaying scheduled meetings hosted by Videxio and Skype for Business, as well as services such as Zoom, Cisco Spark, and more!
